

base element defines the base URL for all URLs

```
<html>
```

```
<title>Page Title</title>
```

```
<base href="http://www.w3schools.com/images/" target="_blank">
```

```
<body>
```

```

```

```
<p>
```

Since we have specified a base URL, the browser will look for the image "html5.gif" at "http://www.w3schools.com/images/html5.gif"

```
</p>
```

```
<p> <a href="http://www.w3schools.com">W3Schools</a>
```

```
</p>
```

```
<p>
```

The link above opens in a new window. This is because the base target is set to "_blank".

```
</p>
```

```
</body>
```

```
</html>
```

Produces

Since we have specified a base URL, the browser will look for the image "html5.gif" at "http://www.w3schools.com/images/html5.gif"

[W3Schools](#)

The link above opens in a new window. This is because the base target is set to "_blank".

After link you will move to new page
