

## Convert calendar date to Julian date

```
Dim toto As Date
    toto = DateTimePicker1.Text
    MsgBox(CLng(Format(Year(toto), "0000") & Format(DateDiff("d", CDate("01/01/" &
Format(Year(toto), "0000")), toto) + 1, "000")))
```

### *'Even better when possible*

```
Private Sub DateTimePicker1_ValueChanged(sender As Object, e As EventArgs) Handles
DateTimePicker1.ValueChanged
    Dim toto As Date
    toto = DateTimePicker1.Text
    TextBox3.Text = CLng(Format(Year(toto), "0000") & Format(DateDiff("d",
CDate("01/01/" & Format(Year(toto), "0000")), toto) + 1, "000"))
End Sub
```
