

Trimming a string

' Initializes string.

```
Dim TestString As String = " < -Trim - > "
```

```
Dim TrimString As String ' Returns "<-Trim-> ".
```

```
TrimString = LTrim(TestString) ' Returns " <-Trim- >".
```

```
TrimString = RTrim(TestString) ' Returns "< -Trim->"
```

```
. TrimString = LTrim(RTrim(TestString)) Returns <-Trim->
```

' Using the Trim function alone achieves the same result. ' Returns "<-Trim->". TrimString = Trim(TestString)
