

Form with a text fields without a name attribute

```
<html>
```

```
<body>
```

```
<form action="action_page.php">
```

```
First name:<br>
```

```
<input type="text" value="Mickey">
```

```
<br>
```

```
Last name:<br>
```

```
<input type="text" name="lastname" value="Mouse">
```

```
<br><br>
```

```
<input type="submit" value="Submit">
```

```
</form>
```

```
<p>If you click the "Submit" button, the form-data will be sent to a page called "action_page.php".</p>
```

```
<p>Notice that the value of the "First name" field will not be submitted, because the input element does not have a name attribute.</p>
```

```
</body>
```

```
</html>
```

Produces

First name:

Last name:

If you click the "Submit" button, the form-data will be sent to a page called "action\_page.php".

Notice that the value of the "First name" field will not be submitted, because the input element does not have a name attribute.

After click

## Your input was received as:

```
lastname=Mouse
```

The server has processed your input and returned this answer.

Use the back button in the browser to return to the example.

The HTML tutorial will not teach you how servers are processing input. Server input is explained in our PHP and ASP tutorials.
